Dear Customer:

We are very excited about celebrating our 30th anniversary. The year 2009 marks a milestone on our history of successfully serving our customers in North America and now also Central America.

Interceramic is today one of the largest and most advanced manufacturers and distributors of tile, stone and related products in the world, with a half-billion dollars in sales and 4,000 team members working throughout the company.

As we look to the future, we continue to dedicate ourselves to making Interceramic the most innovative, customer-focused, efficient company in the world. Providing the best quality and design, the highest standards in service, and the most competitive prices in the industry.

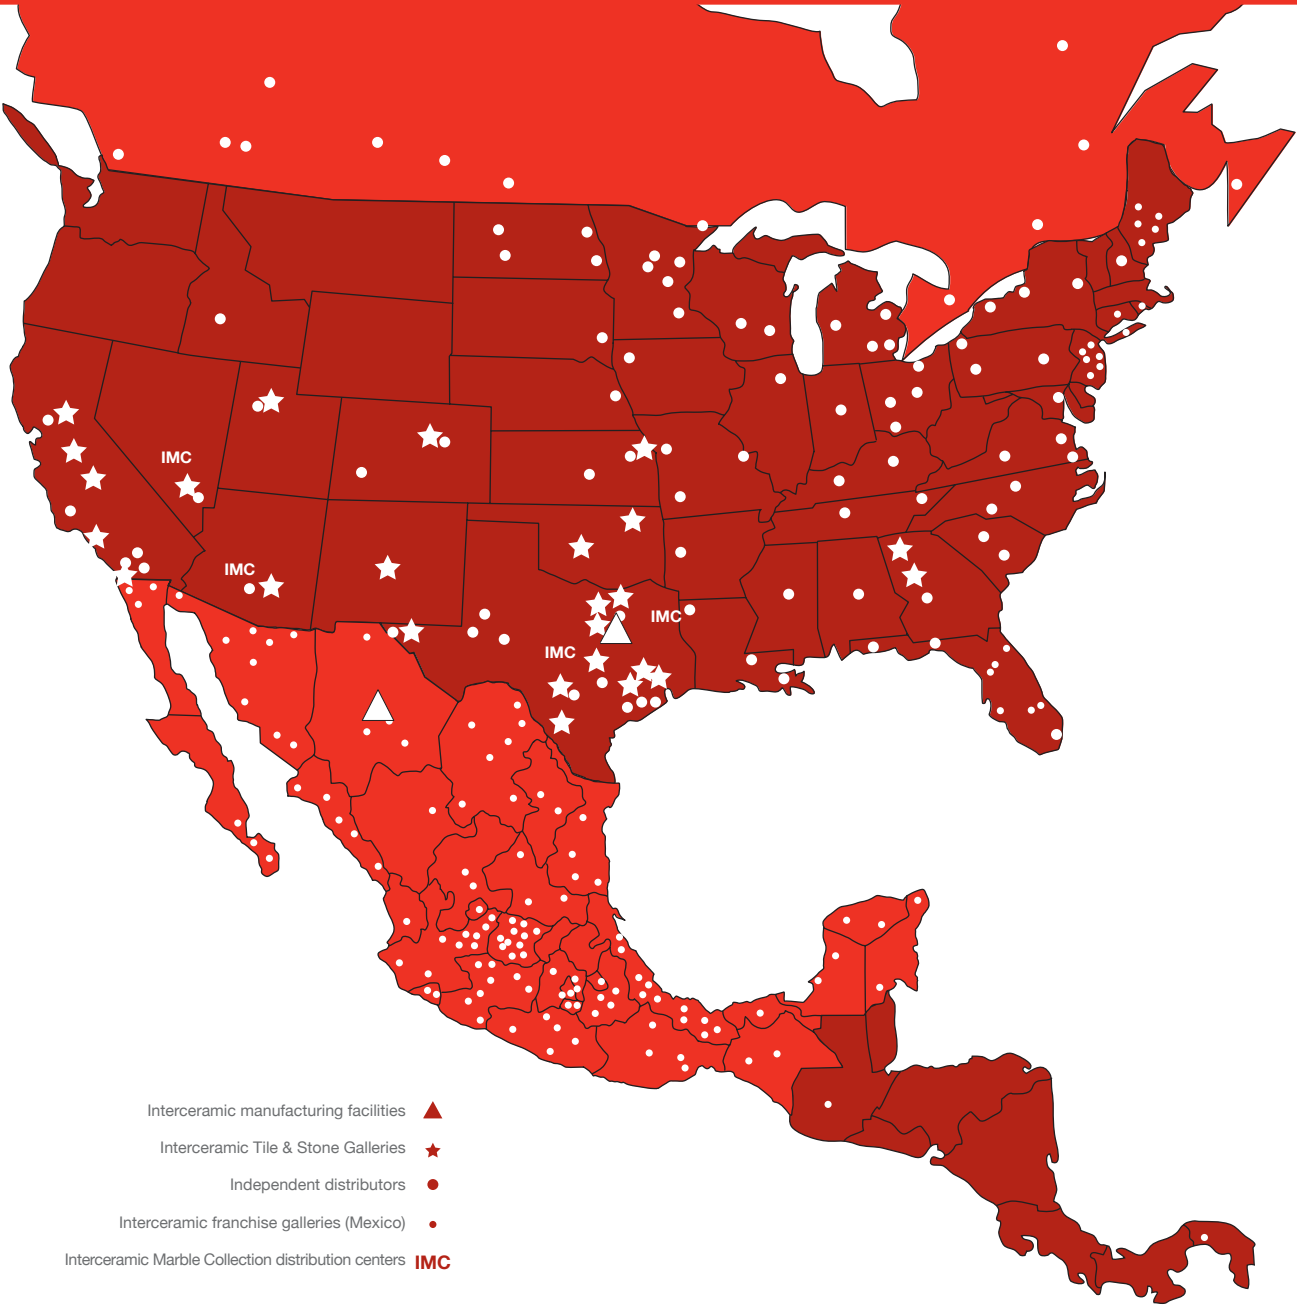

This is our commitment to all our customers in North and Central America.

Sincerely,

A handwritten signature in black ink that reads "Victor Almeida". The signature is fluid and cursive, with a period at the end.

Victor Almeida  
President & CEO

# Our Company

Presses at CUU manufacturing facility

Corporate Headquarters, Chihuahua, Mexico

The longest Kiln of its kind in the world

# Our Company

Interceramic began operations in Chihuahua, Mexico in 1979 as a ceramic tile manufacturing company with the most innovative technology at the time. Today it is one of the largest ceramic tile manufacturers in North America with a total production capacity of 450 million square feet per year from nine facilities housed in four different complexes: three in Chihuahua, Mexico, and one in Garland, Texas.

With almost 30 years in the market, Interceramic has become a leader not only as a manufacturer, but also as a distributor of ceramic tile, bathroom fixtures, setting materials and natural stone. To complement its manufactured products, Interceramic also outsource 65 million square feet of floor and wall tile annually. Through a unique distribution system of 226 franchised stores in Mexico, 26 company-owned design and distribution centers in the US, and an additional 65 independent distributors in the US and Canada, annual sales exceed \$500 million.

# Interceramic Green

At Interceramic, environmental issues are taken very seriously.

## In the manufacturing process:

- 100% of the water used in manufacturing is recycled
- 100% of unfired tile is recycled
- 90% of fired scrap is recycled
- 15% of the heat from kilns is recycled
- Interceramic tile products are manufactured using naturally occurring clays and minerals
- Interceramic has the most advanced dust collection systems to create a modern reclamation process

## Installation and use

- Interceramic tile products do not require solvent-based cleaners or sealers, offering important advantages for indoor air quality during installation as well as for the long-term use in buildings
- Interceramic tile products offer easy maintenance with water-based materials
- Interceramic tile products prevent mold, mildew, fungal and bacterial growth if maintained with regular cleaning products
- Interceramic tile products will not absorb VOC's with chemicals from surrounding materials
- Interceramic tile products are not an original source of contaminants, due to the environmentally sensitive raw materials used in the production process; therefore, they will not compromise IAQ during their installation
- Interceramic tile products have a long life cycle that requires few replacements in the field, outlasting other non-tile products by more than five to one

All test results listed are specific to matte or natural finish only unless otherwise noted.

All tiles meet or exceed ASTM standards for chemical resistance (ASTM C650), crazing resistance (ASTM C424), and thermal shock (ASTM C484) unless otherwise noted.

NOTE: Due to the inherent nature of fired ceramic tile, it is important to note that the coefficient of friction may vary within and between product runs.

# Symbols

Glazed Porcelain  
Unglazed Porcelain

Interceramic Colored-Body Porcelain

Interceramic High Density Ceramic

STS - Shade and texture spectrum

Light STS - The least amount of shade and texture variation attainable in naturally fired clay products.

Moderate STS - Light to moderate shade and texture variation within each carton.

High STS - High shade and texture variation within each carton.

Random STS - Very high shade and texture variation within each carton.

Group Rating

Light traffic - Residential bathroom floors and all interior wall applications.

Medium traffic - Residential interior floor areas except entry ways, kitchens, stairs and pivot points.

Medium heavy traffic - All residential and very light commercial floor applications. Not recommended for commercial entry ways.

Heavy traffic - All residential and most commercial floor applications, including shopping malls and most public areas.

Heavy plus traffic - All residential and all commercial floor applications, where extra heavy duty wearability is required.

Meets recommended guidelines for Americans with Disabilities Act for horizontal surfaces

## HD Ceramic

Interceramic's High Density Ceramic is the newest alternative to porcelain tile. Using the latest technologies and the highest quality materials, HD Ceramic is an innovative alternative to porcelain tiles which can sometimes be more expensive. With a vast array of styles, colors and decorative pieces suitable for commercial and residential floor applications, Interceramic's HD Ceramic provides all the benefits of porcelain tile at a fraction of the cost.

## Porcelain

Porcelain tiles are usually frost resistant and manufactured using clays (including kaolin and feldspar) that have specific properties. The extremely high firing temperatures result in a tile that is stain- and scratch-resistant and harder than granite. Dense and impervious by definition – with a water absorption rate of 0.5% or less – porcelain tile is produced with either glazed or unglazed surfaces. Unglazed porcelains are usually “through-body” with regard to color, while glazed porcelains are most often glazed over white- or buff-body material. While unglazed porcelains often have higher slip resistance than glazed porcelains, they can also be more difficult to clean than the glazed variety. It is important to take this into account when choosing between different porcelain tiles. There are also many non-porcelain tiles that can be used in environments with extreme freeze/thaw cycles and that are manufactured with properties similar to porcelain.

## Glazed Colored-Body Porcelain

Glazed colored-body porcelain is one of the most recent innovations, combining the best qualities of glazed tiles (reduced maintenance issues, increased color and design selection) with those of unglazed tiles (body color that more closely approximates the glazed surface color), making it exceptionally versatile, durable and resistant to wear.

## Installation and Reference Materials

Installation procedures recommended are those indicated in the current Handbook for Ceramic Tile Installation as published by the Tile Council of America, Inc. Specification references recommended are those established in the American National Standard Specifications for the installation of ceramic tile, as published by the Tile Council of America, Inc. Due consideration must be taken with regard to the subsurface, intended use of the tile surface, and exposure to foreign substances such as water, oil, acid, etc., when selecting the type of setting material and grout. If in doubt, the manufacturer of these setting materials should be consulted.

## Shade Variations

Variations in shade and color are inherent in all fired clay products. This natural quality contributes to the overall visual characteristic of ceramic tile and should be expected. Blending of tiles from at least six different cartons during installation is recommended, as shine/finish can differ under certain lighting conditions.

## Limits of Liability

Tests are performed on random samples of Interceramic tile by an independent testing laboratory and are believed to be representative of the general quality of the tile. There is no guarantee by Interceramic that these exact results will be guaranteed on every tile. Interceramic extends no guarantees, expressed or implied, as to slip resistance, wear-time period, gloss or maintenance procedures. Test procedures and individual results are available from Interceramic.

## ANSI A-137.1

Interceramic tile achieves the necessary values for the ANSI A-137.1-P188 (American National Standards Institute) requirement. This is the most complete testing done on ceramic tile and includes tests on thickness, facial dimension, warpage, edging, water absorption, crazing, thermal shock, bonding strength and breaking strength.

## Warranty and Product Use Information

Published test results for Interceramic tile are not guarantees of product performance. All products are subject to variations in coefficient of friction and other technical specifications due to inherent variables in the production process. Test results on all products may vary slightly from tile to tile, and from test to test. Skid-resistant tiles are more difficult to clean; additional effort is necessary to assure contaminants are removed promptly. Since stone is a natural product, it is not possible that every color and marking present in one piece will be present in another. Many glazed ceramic tile products can also vary in shade, color and finish due to the inherent differences in the manufacturing process that can occur over time and from lot to lot. In order to insure that our products meet your individual job requirements, please inspect all stone pieces and tiles prior to installation to determine acceptability. This method will identify any blending or culling necessary. No claims with respect to shade, color or finish, whether in natural stone or glazed ceramic tile products, will be allowed after installation. Unless otherwise stated, Interceramic floor and wall tile is recommended for interior applications only, and is not recommended for use on ceilings or roofs. Check local building codes prior to specification or installation to verify that the technical characteristics of specified Interceramic tile are compatible with all requirements. Printed color samples are for reference only and may not be an exact product match. Contact your Interceramic representative for actual product samples prior to selection, and if you have any questions about Interceramic tile. In the absence of a demonstrated, post-installation product defect, use constitutes acceptance.

## Notice of Warranty

Interceramic guarantees to the original purchaser only that, for a period of one year after the date of purchase, Interceramic will replace any of its manufactured products that are proven to be defective. In order for this warranty to be valid, the following guidelines must be met:

1. The original purchaser must notify Interceramic or an authorized representative in writing within 30 days of the occurrence of any defect.
2. After notification, Interceramic or an authorized representative will inspect and/or test the product for defect and complete a Product Claim form. No claim will be honored without product inspection by Interceramic or an authorized representative.
3. Upon determination that product defect claim is valid, Interceramic will notify the purchaser in writing. In connection with any valid claim, Interceramic reserves the right to either repair, replace or refund the purchase price of the originally purchased product.

## EXCLUSION OF IMPLIED WARRANTIES AND OTHER WARRANTIES

THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE EXCLUDED FROM THIS TRANSACTION AND SHALL NOT APPLY TO THE GOODS SOLD. ADDITIONALLY, ALL OTHER WARRANTIES BEYOND THOSE EXPRESSLY PROVIDED BY THIS DOCUMENT OR REQUIRED BY LAW ARE EXCLUDED.

## CERAMIC TILE

### Glazed floor tile

Routine maintenance of glazed and unglazed floor tile consists of simply sweeping and damp mopping with clean water and a mild solution of neutral cleaner formulated for glazed tile. Areas exposed to heavy traffic can be cleaned with solution of a heavy-duty neutral cleaner formulated for glazed tile and may also require scrubbing, depending on the texture of the surface. It is very important to change the mop water frequently -approximately every 100-500 square feet- depending on how soiled the surface is. Please contact your sales representative for recommendations on the type of cleaner best suited for your application.

### Unglazed floor tile

Unglazed mosaic, porcelain or quarry floor tile should be maintained by dust sweeping and damp mopping with clean water and a mild solution of neutral cleaner formulated for tile. Areas exposed to heavy traffic can be cleaned with a solution of a heavy-duty neutral cleaner formulated for tile and may also require scrubbing, depending the texture of the surface.

As an unglazed quarry tile floor ages, a patina forms on the surface which gives it a soft shine and keeps the floor looking fresh longer.

### Glazed wall tile

Routine maintenance of glazed wall tile usually consists of simply wiping with a damp cloth or sponge. The use of a neutral cleaner formulated for glazed tile is acceptable as long as any residue is removed with a clean water rinse. Countertop applications will require more frequent cleaning in this same manner depending on the exposure to grease, foods, acids, etc. Sealing grout joints on countertops is always recommended to prevent staining. Shower applications will require more periodic cleaning in order to remove soap scum, body oils and hard water deposit buildup. Normally, shower areas may be cleaned by spraying a mild solution of neutral cleaner formulated for glazed tile, letting it stand for three to five minutes, and then rinsing. If the tiled area has been neglected for an extended period of time, a solution of a heavy-duty neutral cleaner formulated for glazed tile is recommended for cleaning.

### Sealers

Refer to the manufacturer's recommendations before sealing unglazed mosaics, porcelain and quarry tile. There is no need to seal glazed ceramic tile. However, sealing the grout joints is recommended unless an epoxy grout is used. Please contact your sales representative for recommendations on the type of grout sealer best suited for your installation.
