STONEPEAK
high tech porcelain

Italian Style Made in the USA

Nestled in the hills of Tennessee's Smoky Mountains is a company with a uniquely American character that honors the time-proven tradition of fine Italian porcelain ceramics.

The character of this company, our company, extends to its operations as well. We know that how we do business is just as important as what we make, and we pride ourselves on our friendly, no-hassle approach to helping our customers find quality tile. In fact, every product we create, every service we provide, and even the centralized location of our facility is designed around one thing: you.

1

For us, it's all about achieving the perfect balance: a harmony between a hard-working team devoted to satisfying our customers, and a company committed to making quality tile. Not so long ago, we envisioned just such a company - one that would bring together the finest products and style at a place that's all about people: the clients we serve, members of our team, and the families who live in our community. Out of that vision emerged a new way of doing business - a refreshing change in the ceramics industry.

Welcome to StonePeak, Italian Style Made in the USA.

THE PRODUCTION PROCESS

Manufacturing with Care

With a fresh new vision and a drive to create a higher standard, we have assembled a team of some of the most respected professionals in the industry and worked to develop a superior manufacturing process. Every phase of our production cycle is planned with the highest care. From the selection and preparation of the finest raw materials to our technologically advanced mixing process and finally to the computer-controlled high temperature firing, the combination results in a product that exceeds the standards of the industry. Additionally, our factory and techniques are completely sensitive to the environment, from recycling and water purification to heat recapture. It's just another part of the American pride and care that shows through in everything we do.

THE PRODUCT

UNGLAZED PORCELAIN TILE

THRU-COLOR PORCELAIN TILES

GLAZED PORCELAIN TILES

Inspiration through Innovation

When we set out to craft the perfect ceramics, we knew we had to find the best possible inspiration. For this we looked to Mother Nature. Today, we make sure that each piece of porcelain tile produced in our factory reflects the individuality and beauty of natural stone, right down to subtle differences in tone, texture and grain. StonePeak fully vitrified porcelain stoneware offers the choice of several glazed, thru-color and unglazed lines, which provide a suitable answer to any application's functional and aesthetical need. Whether through-bodied tiles, thru-colored or subtly glazed, our tiles reflect the color variations of natural products, adding technical features that exceed industry standards. Architects and designers can create with confidence using StonePeak, knowing they can rely on products that are as beautiful as they are functional. This valuable combination of natural beauty and man-made durability is unmatched in the industry.

STONEPEAK
high tech porcelain

AND STONEPEAK THE ENVIRONMENT

THE "GREEN" ISSUE

StonePeak products are "green", that is they are made with 100% natural minerals, including: quartz, clay, kaolin, feldspar, silica, natural coloring agents. They are also green because of what isn't there, that is no sealants, no waxes, no epoxies or man-made binders, no artificial coloring agents. Consequently, they can be used in green buildings. In fact our materials contribute to a safe, healthy indoor environment. They have no artificial component that would release volatile organic compounds (VOCs) into a building environment through off-gassing. In addition, our materials can help reduce the environmental impacts of building operation by delivering exceptional durability and low maintenance requirements.

RECYCLING

StonePeak production is a close-loop process that recycles 100% of raw material and water wastes back into the production cycle. As for other materials employed in our plant, we use recycled materials whenever possible. To help reduce the amount of raw materials and energy required to produce paper and plastic products, we use recycled carton boxes, cardboard packaging, plastic, paper.

ANTI-POLLUTION DEVICES

StonePeak manufacturing facility uses anti-pollution devices that exceed by far the minimum standards required by law, including smoke depurators, sand depurators, water purifiers, reutilization of heat from the kilns and reutilization of production losses.

The sizing (caliber) of the accents will not necessarily be the same as the sizing of a particular field tile. Please install accents with running pattern to avoid problems of coordination.

Design 6 accents are sold in full boxes only.

All sizes are nominal

GLITTER ACCENTS

Glitter accents are suitable for both floor and wall applications

CLASSIC ACCENTS

Classic accents are suitable for wall applications

GLASS ACCENTS

Glass accents are suitable for wall applications

LEATHER ACCENTS

INSTALLATION GUIDELINES

This product is for interior use only. Even in the interior, keep leather away from direct sunlight exposure in order to avoid color fading and/or color changes. Not recommended for wet nor humid

areas. Use on walls only. We recommend installing these borders butt-jointed to the tile used with it without grouting the joint between the tile and the border. Customers should view and approve the product before installation occurs since leather is a natural product and it is inherently variable. These pieces are to be stored in an enclosed area until time for installation comes. Keep in the box in order to avoid scratches.

MAINTENANCE GUIDELINES

In order to keep the look unchanged over time, do not clean with any detergent. Wipe off with a damp soft cloth very well wrung out from time to time as needed to remove dust or use a feather duster. Bee wax can be applied once or twice a year every time the product starts looking dull. Use a clean cotton cloth, apply the wax, allow to dry and wipe off excess wax.

ADDITIONAL INFORMATION

The product has been treated with an oil-based sealer that makes it water-resistant. Regardless, spills should be dried immediately. The glue used between the leather and the ceramic is non-toxic and non-flammable. It is water-resistant. Remember that leather will age over time and develop a rich patina.

GENERAL TECHNICAL SPECIFICATIONS

Physical Properties	ASTM Test	Industry Standards	StonePeak Results
Water Absorption	C373	Impervious <0.5%	≤0.1%
COF Average	C1028	No Requirement	Per collection refer to our web site
Freeze Thaw Cycling	C1026	No Requirement	No evidence of damage
Abrasive Hardness	C501	100	>250
Hardness (Mohs)		No Requirement	7-9
Warpage Average	C485	Warpage ±1% on any edge	≤0.20%
Warpage Average	C485	Warpage ±0.75% on diagonal	≤0.20%
Wedging Average	C502	Wedging ±1%	≤0.20%
Chemical Resistance	C650	No Requirement	Unaffected
Breaking Strength	C648	250 lbf or greater	400-650 lbf
Glazed Wear	C1027	No requirement For glazed material only	Per collection refer to our web site

- Actual test data are available upon request.
- Please ask for individual test reports, as results vary depending on finish.
- Specific technical information is available on our web-site www.stonepeakceramics.com.
- StonePeak collections are materials subject to variations in color and/or vein, as they are created using natural products.
- COF: all values given are for matte or honed material. No values are given for 'polished' materials. StonePeak does not recommend polished surfaces in areas subject to exposure from grease, oil or water.
- Water (especially standing water), oil, grease, etc., create slippery conditions. Floor applications with exposure to these elements require extra maintenance and caution in product selection.
- 2007 TCA Handbook for Ceramic Tile Installation

CARE AND MAINTENANCE

Initial Cleaning During Installation

As with any flooring material, the most important step in the care and maintenance of your porcelain floor is the initial cleaning. The single most important step in caring for your StonePeak Ceramics' floor is the complete removal of setting material, grout residue, and/or any construction residue from the surface of the tiles before they have a chance to dry. In most cases, StonePeak Ceramics' porcelain tiles can be cleaned successfully by scrubbing the installation with a "neutral detergent cleaner" followed by a thorough rinsing.

If a grout residue still remains, rinse further, cleaning the tile several times with clean water, to be certain you have removed traces of grout residue from the surface of the tiles. Grout manufacturers have printed detailed instructions for the proper cleaning of grout residues available. The grout manufacturer's directions should be followed if a grout film is present on the surface of the porcelain tiles.

Once the initial cleaning process has been completed, StonePeak Ceramics' porcelain tiles just need to be swept or vacuumed and damp mopped with a "neutral detergent cleaner" followed by a thorough rinsing.

Special Grouting Precautions

It is recommended that a test patch be done prior to grouting the installation to determine if contaminations of grout pigment will occur on the tile - especially when using light colored tiles or polished tiles that are to be grouted with a dark contrasting colored grout, or when dark colored tiles are to be grouted with a light colored grout. If discoloration does not occur on the surface of the tile, then proceed with grouting. If discoloration does occur, it is recommended to request from the grout manufacturer a proper procedure for the protection of this surface.

Proper Care During The Construction Phase

Like any other finished material, StonePeak Ceramics' porcelain tiles are viewed as a finish flooring material. We strongly recommend that a protective cover such as cardboard, construction paper, plywood, and/or other covering which will protect the porcelain tile during the initial construction phase be used. The use of plastic as a cover is not recommended, since plastic becomes slippery when construction residue comes in contact with the plastic. In addition, plastic has a tendency to delay the natural curing process of the thin-set and/or grout.

Glazed, Matte, Honed and Textured Tiles

StonePeak Ceramics' porcelain tile products do not require the use of sealers, surface coating or waxes on the Glazed, Matte, Honed and Textured porcelain tiles. In fact, the surface of the matte series is so smooth, and non-absorbing, that Stain Test results show that StonePeak Ceramics' porcelain tiles are virtually stain resistant. Applying a sealer or surface coating to matte finish porcelain tiles will only add unnecessary steps to the overall maintenance program - without enhancing the overall appearance of the tile. The use of sealers on impervious porcelain paver tiles will turn a low-maintenance tile into labor intensive high-maintenance tile, and in most cases, these applied surface sealers on matte porcelain tiles change and/or diminish the slip resistance of the porcelain tile.

Please note: Acid washing is rarely recommended. Acid or acid based cleaners should not be used to clean a grout residue. Some acids can burn non-epoxy or cementitious grouts and leave a white film that is almost impossible to remove. Also, the use of certain acid solutions can structurally weaken the grout in the joint of the tile. If in the event a mild solution of sulfamic or phosphoric acid base cleaner is needed, carefully read the manufacturer's instructions.

RECOMMENDATIONS GUIDE

Daily Maintenance

As with any flooring material, general maintenance and cleaning varies depending on the surface, texture of the tile and surface contaminate. Generally, neutral cleaners are more than sufficient to clean and maintain StonePeak Ceramics' porcelain tiles. It's important that the cleaner used is a non-oil, non-soap, and non-animal fat based product. These cleaners have a tendency to act like a magnet and attract dirt and dust, due to the residue build-up left behind during the clean up. Generally water and a soft sponge will remove most contaminants from your porcelain tile. If a cleaning product other than water is used for general cleaning only a neutral Ph cleaner (with the characteristics described above) should be used. These neutral Ph cleaners are available from most sealer manufacturers and can be found at a local hardware store or tile distributor. Cleaners such as Formula 409, Fantastic, or Windex can sometimes be used on unsealed tiles, but most are alkaline in nature and could attack the surface finish. If using a cleaner such as this always test a small area first. If you are not able to remedy the situation using the materials above refer to the Heavy Duty Maintenance section of the Recommendations Guide.

Heavy Duty Maintenance

If contaminants occur due to more than daily routine activities, then the use of a stronger cleaner may be needed. Use caution in selecting the product for heavy duty cleaning as many chemicals can damage items of the installation or near the installation as well as discolor and/or stain certain types of tiles. Porcelain tiles are the most durable tiles available, however, we do not test every chemical made, and therefore a test area is needed to confirm that the product selected is suitable for the removal of the contaminant in question. Please refer to the Stain Removal Guide for information about particular stains and manufacturer information. The information listed is only a guide. For more specific information please contact one of the manufacturers listed. Always follow the directions from the manufacturer of the cleaning product you intend to use.

Stain Removal Guide
